Safety4El Newsletter

Thank you Kent Andersen for subscribing to our newsletter.

The project with the official title “Improved Safety for Electricians” started its EU Co-funded period on September 1st. During the first three months the partnership has been busy preparing the first steps of the project outputs and dissemination of the project objectives has started.

Learn more about the project from:
The website: http://safety4el.net/
Facebook: https://www.facebook.com/safety4el
Twitter: https://twitter.com/safety4el

The first project brochure is now available in English
The Safety4El brochure can be downloaded from http://safety4el.net/docs/Safety4El-brochure-English.pdf

The teams are preparing brochure versions in Danish, Greek, Maltese, and Spanish
Report on safety training and tests for electricians across the partnership countries

The teams have started working on a report, which will map the different regulations for safety courses and tests for electricians across the partnership countries.

The partner teams are compiling reports on the mandatory and optional courses and tests systems in each country. The reports will be mapped against each other to verify the main differences and possible barriers to an electrician's mobility.

After the first meeting the college partners are working on national reports, that will be mapped against the other reports. Politeknika Ikastegia Txorieri will then produce the joint report, which after approval by the other partners will be translated into Danish, Greek, Maltese, and Spanish.

The report will make recommendations for a European regulation of safety for electricians based on either mandatory tests, courses, or combinations of course followed by tests.

Report with differences in electrical installations across the partnership

The second project outcome being prepared is a report, which will map the differences in electrical installation systems across the partnership countries.

The partner teams will compile reports on differences in electrical installations that may cause risks for electricians coming from one of the other partner countries (CY, DK, ES, MT, UK). The reports will list the main differences, e.g. looping and spur systems.
After the kick-off meeting the partners are compiling national reports, which at a BlackBoard meeting in March 2017 will be mapped against the other reports. MCAST will then produce the joint report, which after approval by the other partners will be translated into Danish, Greek, Maltese, and Spanish.
