

## Workshop 1 – School Enterprise

- **School-Enterprise:** a different learning approach from work-based learning, where students realize real product for real customers in school-based working activities
- An existing and successful approach:
  - It enhance **Excellence and Quality** in training: professional skills, but also life skills, literacy and numeracy – Real challenges for Real learning
  - It consolidates **Inclusion**: an approach where «studying» becomes «learning»
- It requires to Rethink VET models:
  - Teachers and Tutors as guidance, in a shared process of learning – Teacher Education
  - Investments: New environments are requested (workshops, machineries)
  - Sustainability can be increased by school-based production
  - A stronger collaboration with stakeholders is crucial – families, unions, companies, policy-makers
